

## SIGRAFLEX® iNXT

TA Luft gasket sheet made of impregnated SIGRAFLEX flexible graphite foil reinforced with flat stainless steel

SIGRAFLEX iNXT is a graphite gasket sheet made of SIGRAFLEX flexible graphite foils reinforced with a flat stainless steel foil. To reduce leakage, the gasket material is impregnated. A surface finish is applied to improve the antistick properties.

### Applications

- For all common pipework, vessel and pump flange designs
- For operating pressures from vacuum up to 100 bar
- For corrosive media
- Operating temperatures range from  $-269^{\circ}\text{C}$  to approx.  $550^{\circ}\text{C}$  depending on chemical resistance. Life time might be limited at high temperatures. Consult the manufacturer when application temperatures exceed  $450^{\circ}\text{C}$ . Please refer to our technical guideline regarding thermal stability.
- Gaskets e.g. for the chemical, petrochemical and refinery industries, power plants or gas supply
- Also, highly suitable for existing plants due to high fault tolerance

↑ Cross-section

## Properties

- Reduction in fugitive emissions due to high leak-tightness, suitable for use in TA Luft applications
- Surface finish reduces sticking to flange surfaces for easier disassembly
- High blow-out resistance and good mechanical strength
- Excellent oxidation resistance
- Long-term stability of compressibility and recovery, even under fluctuating temperatures
- Soft, highly adaptable, thus very high fault tolerance
- Good chemical resistance
- No aging or embrittlement, thus long-term stable operational reliability
- Good price-performance ratio, low life cycle costs
- Easy to process by cutting and punching
- Asbestos-free (no associated health risks)

### Definitions

$\sigma_{VU/0,1}$	Minimum gasket assembly stress needed to comply with leakage class L 0.1 [according to DIN 28090-1]	$\epsilon_{KSW}$	Compression set under a gasket stress of 35 N/mm <sup>2</sup>
	Recommended gasket assembly stress: $\geq 20$ N/mm <sup>2</sup> up to $\sigma_{B0}$	$\epsilon_{KRW}$	Gasket recovery after reduction in gasket stress from 35 N/mm <sup>2</sup> to 1 N/mm <sup>2</sup>
$\sigma_{BU}$	Minimum gasket assembly stress in service, where $\sigma_{BU}$ is the product of internal pressure $p_i$ and gasket factor $m$ for test and in service [ $\sigma_{BU} = p_i \times m$ ]	$\epsilon_{WSW}$	Gasket creep compression under a gasket stress of 50 N/mm <sup>2</sup> at 300 °C after 16 h
