

SGL Carbon Puts Logistics Center at the Meitingen Site into Operation

SGL Carbon put its new logistics center at the Meitingen site into operation according to schedule on July 1, 2019. The official inauguration took place as part of Family Day last Saturday. In the future, all incoming and outgoing goods as well as quality assurance will be bundled on a logistics space measuring 6,500 square meters.

Overall, the company estimated approx. 8 million euros for the new center, which will now be completed well below the calculated budget. The project was a win-win, both on time and budget. Success factors included defining the scope of services precisely and early as well as a detailed planning before implementation with contractors.

Dr. Markus Partik, site manager Meitingen: "The new logistics center will significantly improve our processes. By combining all incoming and outgoing goods as well as quality assurance at one location, we can better meet the standards of our customers. Plus, there will be less traffic on the plant grounds."

In addition to SGL Carbon, Brembo SGL Carbon Ceramic Brakes (BSCCB) will be one of the main users. The logistics center will be networked with a new digital transport control system that regulates the distribution of goods within the buildings and production halls.

About SGL Carbon

SGL Carbon is a technology-based company and world leader in the development and production of carbon-based solutions. Its high-quality materials and products made from specialty graphite and composites are used in industrial sectors that determine the future: automotive, aerospace, solar and wind energy, semiconductor and LEDs as well as in the production of lithium-ion batteries and other energy storage systems. In addition, SGL Carbon develops solutions for chemical and industrial applications.

In 2018, SGL Carbon SE generated sales of around 1 billion euros. The company has approx. 5,100 employees at 32 locations in Europe, North America, and Asia.

Materials, products and solutions from SGL Carbon are embedded in the major topics of the future: sustainable mobility, new energies and cross-industry digitization. Further developments in these areas demand more intelligent, more efficient, networked and sustainable solutions. This is where the entrepreneurial vision of SGL Carbon evolves around: contributing to a

Important note:

To the extent that our press release contains forward-looking statements, the latter are based on information that is available at present and on our current forecasts and assumptions. Forward-looking statements, by their very nature, entail known as well as unknown risks and uncertainties that may lead to actual developments and events differing substantially from the forward-looking assessments. Forward-looking statements must not be understood to be guarantees. Instead, future developments and events depend on a large number of factors; they comprise various risks and imponderables and are based on assumptions that may possibly turn out not to be appropriate. These include unforeseeable changes to fundamental political, economic, legal and societal conditions, particularly in the context of our main customers' industries, the competitive situation, interest and exchange rate trends, technological developments as well as other risks and uncertainties. We perceive additional risks e.g. in pricing developments, unforeseeable events in the environment of companies acquired and Group member companies as well as in current cost savings programs from time to time. The SGL Carbon assumes no obligation and does not intend to adjust or otherwise update these forward-looking statements either.
