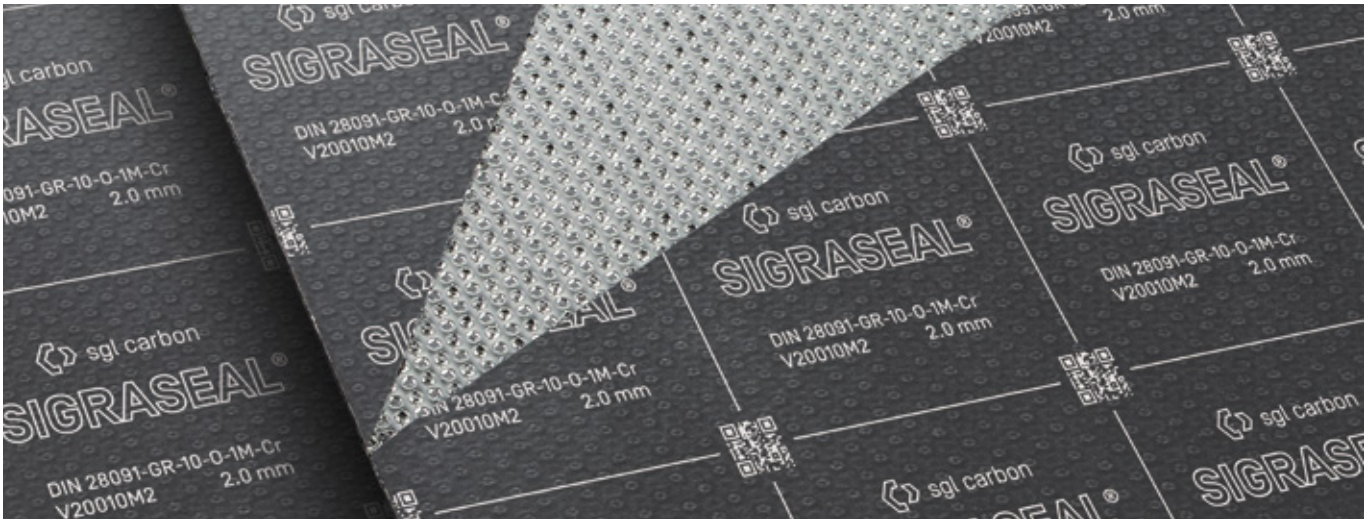
SIGRASEAL®

Flexible graphite foil reinforced with tanged stainless steel



SIGRASEAL is an adhesive-free gasket sheet made of flexible graphite foils reinforced with tanged stainless steel.

Applications

- For all common pipework and vessel flange designs
- For one-piece gasket designs up to an outside diameter of 1500 mm; for diameters above 1500 mm, for example two-layer structures with segmented sections and staggered joints are recommended
- For operating pressures from vacuum up to 100 bar
- For corrosive media
- Operating temperatures range from –250 °C up to 500 °C depending on chemical resistance. Life time might be limited at high temperatures. Consult the manufacturer when application temperatures exceed 400 °C. Please refer to our technical guideline regarding thermal stability.
- Gaskets for the chemical, petrochemical and refinery industries
- Steam pipework in power generation plants and heating equipment
- Existing plants

Properties

- High blow-out resistance and mechanical strength
- High fault tolerance during assembly and operation
- Good chemical resistance
- Long-term stability of compressibility and recovery, even under fluctuating temperatures
- No measurable cold or warm flow characteristics up to the maximum permissible gasket stress
- No aging or embrittlement (no adhesives or binders)
- Asbestos-free (no associated health risks)

Approvals/Test reports

Please see www.sigraflex.com/downloads for details

- BAM oxygen
- FDA and LFGB (SGS Institut Fresenius)

The gasket factor conversion formulas as per AD Merkblatt B7 are as follows				$k_0 \times K_D = \sigma_{VU} \times b_D$ $k_1 = m \times b_D$		

Definitions

σ_{VU}	Minimum gasket assembly stress. Recommended gasket assembly stress: ≥ 20 N/mm² bis σ_{BO}
σ_{BU}	Minimum gasket assembly stress in service, where σ_{BU} is the product of internal pressure p_i and gasket factor m for test and in service ($\sigma_{BU} = p_i \times m$)
σ_{VO}	Maximum permissible gasket stress at 20 °C
$\sigma_{BO\ at\ 300\,°C}$	Maximum permissible gasket stress in service
m	$m = \sigma_{BU}/p_i$
„m"-factor	Similar to m, but defined acc. to ASTM, hence different value
„y"-factor	Minimum gasket stress in psi
k_0	in mm, factor for gasket assembly stress
k_1	in mm, factor for gasket stress in service

ε_{KSW}	Compression set under a gasket stress of 35 N/mm²
ε_{KRW}	Gasket recovery after reduction in gasket stress from 35 N/mm² to 1 N/mm²
ε_{WSW}	Gasket creep compression under a gasket stress of 50 N/mm² at 300 °C after 16 h
ε_{WRW}	Recovery after reduction in gasket stress from 50 N/mm² to 1 N/mm²

The percentage changes in thickness of ε_{KSW}, ε_{KRW}, ε_{WSW} und ε_{WRW} are relative to the initial thickness.

Unless stated otherwise, all values are valid at room temperature, typical, non-binding and subject to change. Please note some values correspond to the graphite foil only. For engineering or design purposes please contact our technical sales team.
